Aurora Infusion Controller

Synthetic product-training manual | Fixture AIC-001

Intended use

The Aurora Infusion Controller is a fictional training device used only to validate this platform's ingestion, authoring, simulation, assessment, and credential evidence paths. It is not a medical device, clinical instruction, or regulatory guidance.

Learning objectives

After training, a learner can identify the control panel, open the safety cover, start a simulated priming sequence, respond to a blocked-line warning, and complete the required shutdown sequence.

Safety boundary

All procedures in this fixture are simulated. The learner must not use this material to operate real equipment. A published course must preserve this limitation and show the source citation for every consequential step.

Source anchors

Anchor	Content
AIC-MAN-01	Device overview and component identification
AIC-MAN-02	Priming procedure: steps 1-4
AIC-MAN-03	Blocked-line fault and recovery
AIC-MAN-04	Shutdown and completion evidence

Revision: AIC-001.1 | Synthetic fixture | Rights: generated for testing

Components and procedure

Component ID	Name	Learner action
AIC-C01	Control panel	Select Prime and confirm the displayed mode
AIC-C02	Safety cover	Open before beginning the simulated procedure
AIC-C03	Line sensor	Inspect status and respond to a blocked-line warning

Procedure AIC-P01: Simulated priming

1. Identify the control panel. 2. Open the safety cover. 3. Select Prime. 4. When the line sensor reports Blocked, acknowledge the warning and inspect the simulated line. 5. Clear the simulated blockage. 6. Confirm Ready and complete shutdown.

Fault AIC-F01: Blocked line

The blocked-line state is intentionally injected during the procedure. Passing requires the learner to acknowledge the warning, inspect the line sensor, clear the blockage, and resume only after the server records the Ready state.

Assessment and credential expectation

Criterion	Required evidence	Pass rule
Identify components	Semantic selections for AIC-C01, AIC-C02, AIC-C03	All three correct
Handle fault	AIC-F01 acknowledgement and clear event	Correct sequence with no bypass
Complete procedure	Server-ordered action sequence AIC-P01	All required steps in order
Safety boundary	Learner acknowledged simulation-only notice	Recorded before start

Expected credential: organization-issued platform certification for Aurora Infusion Controller AIC-001, bound to an immutable course release and verifiable online. This fixture never represents licensure, accreditation, regulatory approval, or a portable cryptographic credential.
